

From heads down to heads up.

AI adoption doesn't fail because of technology. It fails because people weren't part of the process. We fix that.

THE PROBLEM

Companies are spending real money on AI tools, but teams aren't using them. Leadership worries about falling behind. IT worries about data security. Employees aren't sure what's expected of them. Nothing sticks, and nobody's happy. It doesn't have to be this way. **We help companies shift from Heads Down to Heads Up work.** That means **strategically** integrating AI into your company, rather than racing to adopt tools just because you **think** you should. That way, leaders can chart a course for the future, IT can focus on innovation instead of compliance, and employees can work smarter, not just faster.

WHAT MAKES US DIFFERENT

01

With Teams, Not To Them

We work alongside your people to find where AI makes their jobs genuinely better - not just better for the bottom line.

02

Within Your Guardrails

Every engagement operates within the boundaries your business sets to protect itself - data, compliance, and culture.

03

Adoption That Sticks

When people feel like they're part of it, they actually use it. We measure success by what changes, not what we deliver

HOW WE WORK

From Overwhelm to Operational Advantage

● AI Opportunity Assessment

We map your operations and identify where AI creates genuine value for your teams — not just cost savings on a slide.

● Team-Led Implementation

We run working sessions with your people, building workflows they own. Not a deck. Not a handoff. Real adoption.

● Change Enablement

We help leaders communicate the shift from heads-down execution to heads-up thinking - so the culture catches up to the tools.

● Ongoing Advisory

AI moves fast. We stay close so you don't lose ground after the engagement ends

OUR PROCESS

Four Steps to Lasting Advantage

1 Discover

We learn your business, your team, and where friction lives today.

2 Design

We map AI to real workflows with your people in the room.

3 Deploy

We stand it up inside your private AI lab, *Oliver*, and train your teams hands-on.

4 Sustain

We stay close to ensure adoption holds and advantage compounds.

THE SOLUTION

Your Private AI Lab

A secure, managed environment where your teams can experiment with real data — without touching your IT infrastructure or exposing sensitive information. Oliver is where the Heads Down to Heads Up shift actually happens. Your teams test, learn, and build confidence in a space that's safe by design and owned by you at the end.

- Isolated per-client infrastructure
- Your data stays inside your walls
- Prototype in weeks, not months
- Managed by Keel3, owned by you
- Handoff-ready at engagement end

Ready to make your people the advantage?
